The gating piece of technology in this marvel of manufacturing progress has always been the process of lithography - the photochemical printing of circuit patterns onto semiconductor wafers. Its focus is on the underlying scientific principles of optical lithography, rather than its practice.

Fundamental Principles of Optical Lithography: The Science of Microfabrication. The fabrication of an integrated circuit requires a variety of physical and chemical processes to be performed on a semiconductor substrate. Fundamental to all of these processes is lithography, ie, the formation of Fundamental Principles of Optical Lithography: The Science of Microfabrication.
